

NANOGrav's SPOT (Space Public Outreach Team) is a network of 31 student ambassadors presenting the "Tuning in to Einstein's Universe" presentation. The interactive presentation is aimed at K-12 students across the U.S., teaching a brief history of astronomy from Galileo to gravitational waves, with an emphasis on pulsar timing methods. Thousands of students have been reached, while more are expected in the coming years.

The map shown below represents the location and number of students reached according to the radius of the circle at the location.
